Hi Paula,

Randy is in the field tomorrow, and I have meetings all day, so we wouldn't be able to attend. Let us know what happens. My biggest question is if there are any issues with the sampling locations they are proposing. SGC, is of course free to collect whatever samples they want, but the agencies should also inform SGC if we think they need to modify or adjust the sampling locations and that we really need to do this under a structured framework such as an AOC. Your thoughts?.

Doug & Randy – I have offered to have discussion of the proposed sampling locations between SGC and EPA/BLM tomorrow AM sometime between 10:00 AM and noon (Wednesday). I haven't heard from SGC as to whether they will take us up on our offer. If the State wishes to participate, please let Liz or I know ASAP so that we can include you in the discussion.

**Subject:** High-flow surface water sampling on the Upper Animas River

Mr. Jamison,

Nathan Longenecker and Larry Perino suggested that I provide this e-mail to inform you that Sunnyside Gold Corporation (SGC) will be performing high-flow surface water monitoring on the Upper Animas River, in the reach between USGS Gauge No. 09358000 and Arrastra Creek during the week of May 11. Attached are a Google Earth map showing the sampling locations, a PDF map with the locations and a spreadsheet that presents the coordinates of each sampling location, as well as some history on each site.

If you have questions or would like to discuss SGC's sampling program, please contact Nathan, Larry or myself.

Sincerely,

Pat Maley
